PREFACE

Every person in Hinduism should know what Horoscope is but unfortunately not many people know what Horoscope is. Horoscope predicts one's future and horoscope is used for marriage matching or if there are problems in life then people refer Horoscope to know what is causing the problem and what should be done. Most of the people know this much only and don't go in deep.

There are many things in our culture that have not transferred to us or we have lost the history behind it.

I think horoscope is one of them.

According to me Horoscope is a very big mystery and we have lost some aspects of it.

Planets affect a person's life but how do they affect? We do not have the history of what happens in the body due to the different positions of the planets and how it affects the human body organs. Astrologers will tell you that this can or will happen but they cannot tell you exactly what chemical & physical process is taking place in our body.

Through this book I have tried to recall some lost things and my opinion regarding the links or history that we have lost. This needs to be researched. I have only presented my reasoning.

According to me Horoscope is not only the position of the planets but it represents the physical and mental abilities of a human being and structure of our nervous system. This structure is imprinted in our body at the time of our birth and it depends on the Birth time and place where you Born.

As per my opinion our whole life & our thought processes depends on this imprint only.

From this book I tried to explain how it might works. I hope that even those who do not believe in Horoscope will change their minds after reading this book
